THE UNIQUE FEATURES OF ISLAND WOUND DRESSING

with  **Microban®**
antimicrobial product protection

Contains a broad-spectrum anti-bacterial agent that is effective against the following pathogens:

- Methicillin resistant Staphylococcus aureus (MRSA)*
- Acinetobacter calcoaceticus ATCC*
- Micrococcus luteus ATCC*
- Staphylococcus species ATCC*
(formerly a strain of Staphylococcus Epidermis)
- Escherichia coli ATCC*
- Enterobacter cloacae ATCC*
- Proteus vulgaris ATCC*
- Vancomycin resistant Enterococcus faecium (VRE)*
- Klebsiella pneumoniae ATCC*

Medwrap

vs.

Standard

*Safe,
Predictable
and
Cost-Effective*

Efficacy of the antibacterial agent will not diminish over time - compare to silver, iodophor, CHG and zinc.

The antibacterial agent has no known cytotoxicity - no documentation of adverse reaction to triclosan.

The only wound cover with antibacterial impregnated in the scrim - body fluids will neither deplete or transport the antibacterial agent from the incision site.

Our wound cover can remain in place longer than untreated dressings - dressing changes are only a function of the amount of exudate.

Unlike other antimicrobial wound dressings, MedWrap's Island Wound Dressing with Microban® protection provides potent protection against bacteria such as MRSA without the cytotoxicity, skin discoloration or leaching of pharmaceuticals into the wound seen in other, more costly wound covers. This dressing's design makes it easy to apply by clinicians, patients or family members. The dressing contains no latex.

The one choice for sterile wound dressing products!
